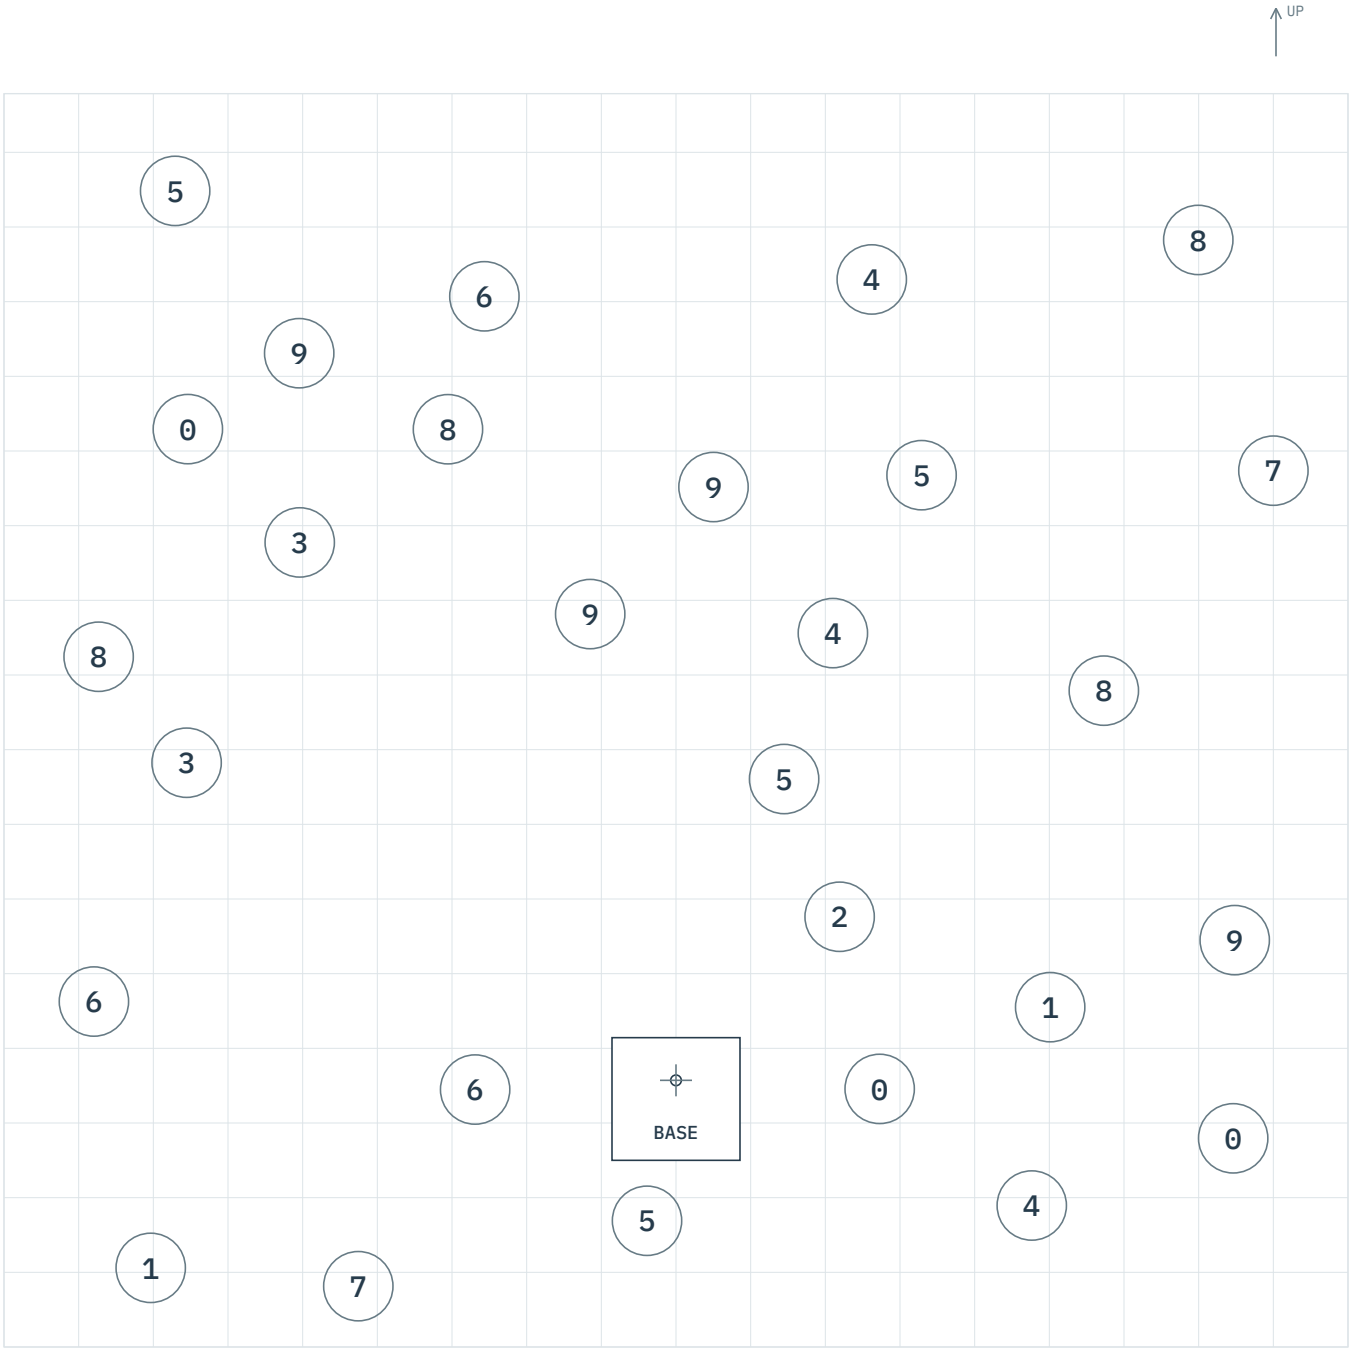
ROBOTICS / WORK AREA

Keep the base here. Read the digit inside the hand after each test.



Move the arm, not the board. Keep its printed face up.

1 inch / 25.4 mm

Preparation: mount on firm card; make one hole at BASE. Print at 100% / Actual size.

CANADARM / CUTTING SHEET

Prepare and assemble before play. These are a simplified flat game model.

Join the two long pieces at ELBOW.

Attach the short reading hand at WRIST.

Fix the shoulder end to BASE on the board.

Use three split pins. Leave joints free to turn.

All pieces stay printed side up. No cutting during play.

SHOULDER TO ELBOW

Solid: outer cut. Small circles: pin holes.

ELBOW TO WRIST

Solid: outer cut. Small circles: pin holes.

WRIST / READING HAND

Remove the large dashed circle. Keep the small pin hole.

1 inch / 25.4 mm

Opaque cardstock / reinforce pin holes if needed / paper model dimensions are game geometry.

SKY OBSERVATIONS

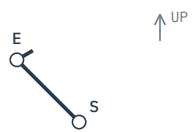
Date _____ Time _____

Location _____

I've been trying a few moves with my little Canadarm. I only sketched half at a time! Join the views at E, the elbow. Keep UP pointing the same way.

Test 1

shoulder / elbow

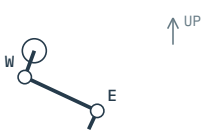


elbow / hand

Test 2

shoulder / elbow

elbow / hand



SKY OBSERVATIONS

Date _____ Time _____

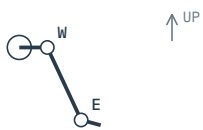
Location _____

Two more tests. Keep the base fixed, then read the digit inside the hand for each pose. Take the tests in order.

Test 3

shoulder / elbow

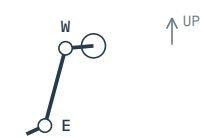
elbow / hand



Test 4

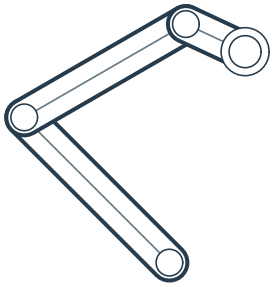
shoulder / elbow

elbow / hand

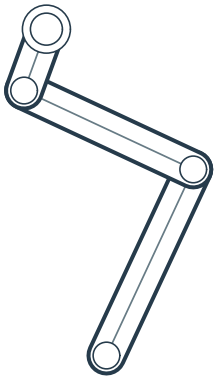


DESIGNER / PROTOTYPE KEY

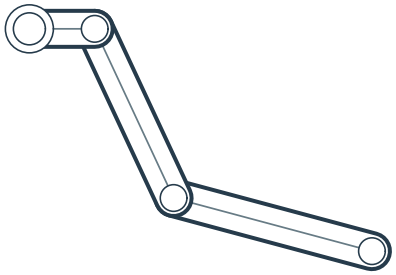
Candidate mechanism and values. Keep this page away from players.



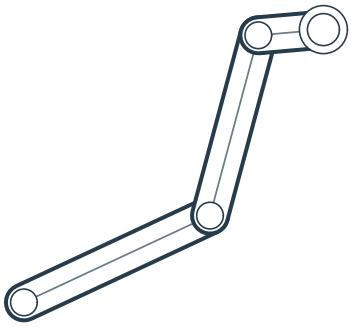
Test 1 -> 5



Test 2 -> 9



Test 3 -> 3



Test 4 -> 8

Candidate extraction: 5 - 9 - 3 - 8. Not a decided envelope answer.
Print every page at 100% / Actual size. Mixed page sizes: letter and 4 x 6.
Print the two small notes centred on letter paper if the printer requires it.
Prepare three arm pieces and three split pins; fix BASE and allow rotation.
Diagrams preserve UP and scale: join the shared E joint; no angle arithmetic.
Digits are at computed hand centres. Incorrect poses may still reach digits;
players must satisfy both sketches, not merely find any digit on the board.
Digital checks verify the constructed poses and digit clearances only.
Cutting, joint friction/slack, note legibility and player interpretation untested.
