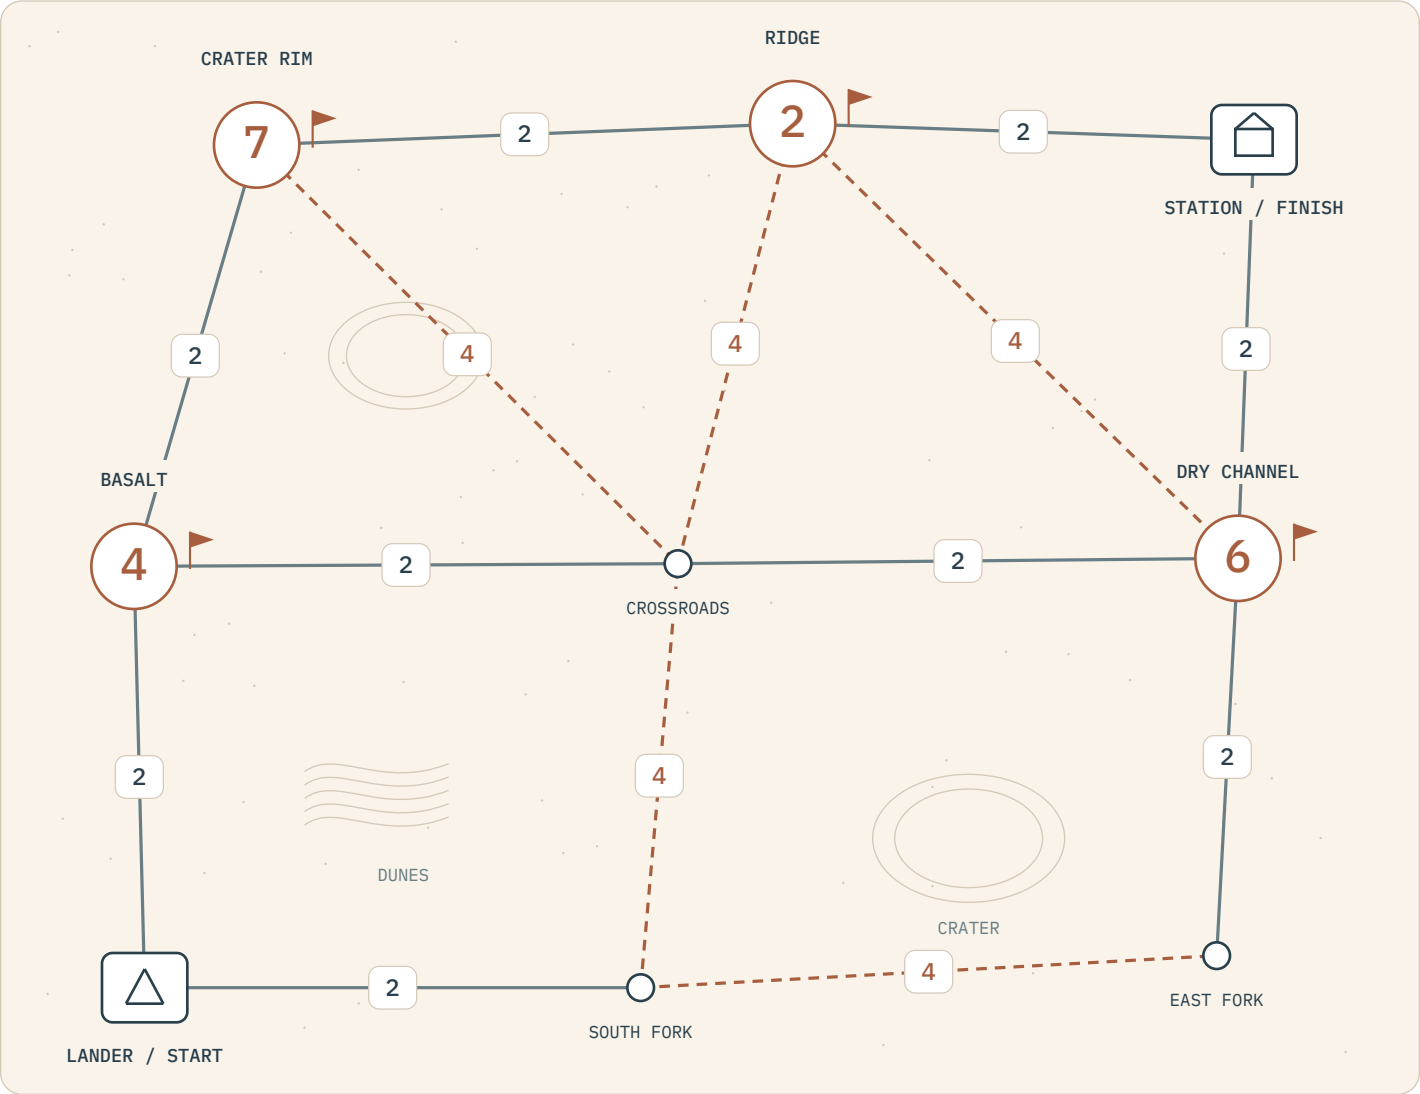
ROVER / FIELD SURVEY

SECTOR K-17 / MARS TERRAIN SKETCH

BATTERY: 12 UNITS **4 SAMPLE SITES**



A route worth taking

I've marked four places where I'd like to collect samples. Can you find a route from the lander to the station before the battery runs out?

Follow the drawn trails. Each small boxed number is the battery cost for that whole trail section.

Visit all four flagged sites, in any order. Do not revisit a location. Finish at the station.

You have 12 battery units; there is no recharging. Write the large sample-site numbers in the order you visit them.
